

GhanaPostGPS Hubtel market place Api

On initial load the user detail is passed to the Url before loading the webview

https://marketplace.hubtel.com?user_name=Emman&telephone=233546245975

To get user current location detail,
Call a javascript function

WebAndroid.getUserLocationDetails();

This will return the javascript object

```
{
  userName: "",
  userTelephone: "",
  currentLatitude: "",
  currentLongitude: "",
  currentDigitalAddress: ""
}
```

To get user saved addresses

Call a javascript function **WebAndroid.loadSavedAddress();**

This will return the javascript array of object

```
[
  {
    title: "",
    digitalAddress: "",
    streetAddress: "",
    latitude: "",
    longitude: ""
  }
]
```

To searchAddress offline

Call this javascript function **WebAndroid.searchAddress();**

This will return the javascript array of object

```
[
  {
    title: "",
    digitalAddress: "",
    streetAddress: "",
    region: "",
    district: "",
    latitude: "",
  }
]
```

```
        longitude: ""
    }
]
```

To searchAddress Online
Call a javascript function

WebAndroid.searchAddressOnline();

This will return the javascript array of object

```
[
    {
        title: "",
        digitalAddress: "",
        streetAddress: "",
        region: "",
        district: "",
        latitude: "",
        longitude: ""
    }
]
```

Please note: the function must be a global function.
